

CONNECTING EVERYONE, EVERYWHERE

DAS for In-Building Wireless Services

Wireless voice and data services and public safety requirements continue to drive demand for in-building wireless. Consumers expect ubiquitous service, especially indoors. A leader in in-building distributed antenna systems (DAS), Connectivity Wireless Solutions delivers carriers and enterprises reliable cellular service inside commercial buildings, campuses and public venues.

Core Competency in In-Building Wireless

Connectivity was founded by pioneers in in-building wireless with extensive background among the wireless service provider community. Today, the company's industry-leading team of DAS experts provide more than 150 years of combined experience in wireless.

With more than 700 indoor DAS installations across the nation, Connectivity serves carrier and enterprise customers with tried-and-true turnkey systems. A comprehensive, efficient process sets best-practice standards based on unmatched depth and breadth of DAS expertise. This proven process is backed by one of the largest wireless RF engineering teams in the industry.

Wireless Demand Shows No Sign of Waning

"With wireless connections now equal to more than 91 percent of the U.S. population, mobile broadband is pivotal to ensuring all Americans are 'digitally literate'...Our members have truly revolutionized and improved the way we live and work in ways that were unimaginable only a few years ago, whether it's by providing new content and apps, new devices or new uses. Mobile broadband will increasingly play a vital role in people's lives."

Steve Largent, President and CEO
CTIA, The Wireless Association

ANY BUILDING, ANYWHERE

Offices and corporate campuses
Hotels and resorts
Hospitals and medical centers
Airports and train stations
Convention centers
University campus buildings
Athletic stadiums and ballparks
Government/municipal buildings

Hospitality

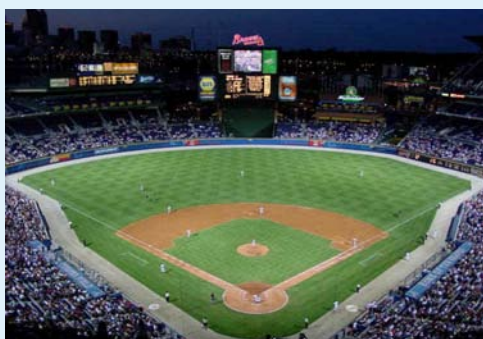

Healthcare

Public Venue

Government

For Wireless Service Providers

Serving all major wireless service providers in the US, Connectivity works closely with carriers in local markets to deliver in-building DAS for a wide variety of single- and multi-site applications across all industries. An extension of the carrier team, Connectivity provides professional services including site survey and analysis, RF design and engineering, and installation services.

For Enterprises, Government & Higher Education

Connectivity provides a turnkey in-building DAS solution that simplifies the process for enterprise, government and higher education customers and their IT departments. Connectivity handles the entire planning, design and implementation phases, including coordinating retransmission agreements and integration with wireless service providers, so that customers can focus on their core business. In addition, flexible financing models enable enterprises to overcome financial barriers to adoption.

To Meet Public Safety Requirements

Given continued heightened awareness around national security, regulatory changes may have sweeping affects on the wireless industry and its ability to support wireless applications for public safety and emergency preparedness. Connectivity stays abreast of regulatory changes to ensure its in-building DAS solutions are designed to meet current and future public safety requirements.
